2. The application has been amended as follows:

In the claims:

Claims 1, 8 and 17, line 4, the phrase "a each end" has been changed to --at each end--.

Claims 1, 8 and 17, line 5, the phrase --outer and inner-- has been inserted after the word "two".

Claims 1, 8 and 17, line 7, the word "segment" has been changed to --segments--.

Claim 20, line 6, the word --radius-- has been inserted before the words "upper" and "lower".

applicant, specifically an apparatus comprising a reverse venturi chamber or venturi chamber open at each end, the chamber being divided into two sections, a left section and a right section, each section having two outer and inner segments, each of which segments has a top wall and bottom wall, the outer segments having the same radius concave radius upper wall and convex radius lower wall, while the inner segments have a same radius convex radius upper wall and a concave radius lower wall, together in combination with the other claimed features of applicant's invention.

4. The following is an examiner's statement of reasons for allowance of claims 20 and 21: The prior art did not teach or suggest a reverse atomization chamber apparatus as claimed by the applicant, specifically an apparatus comprising an open ended, flat side walled chamber, divided into left and right sections, each having outer and inner segments, each segment having a top wall and bottom wall, the outer segments having the same radius concave radius upper wall and convex radius lower wall, while the inner segments have a same radius convex radius upper wall and a concave radius lower wall, together in combination with the other claimed features of applicant's invention.
